

**Name:** 5 View

**Goal:** Viewing all owned documents. Viewing not owned document after request

**Actors:** User( Owner (Patient), Authorized( Nurse, Doctor) )

**Preconditions:** User is already registered. Owner already uploaded file and file form. Authorized has an accepted request

**Success End Condition:** User viewed wanted document

**Failed End Condition:** Viewing wrong document / document missing

**Trigger:** User is searching for an document. Information that the document may possess needs to be viewed. Preview before printing

**Main Success Scenario:**

1. User found wanted Document after Search and wants to view it
2. Authorized places request for viewing rights.
3. Authorized is accepted to view the document
4. The document is viewed on the screen

**Extensions:**

- 3a. The Authorized got no answer on the request (repeat 2)
- 3b. The Authorized got declined.
  - 3b1. User gives up and looks for a different Document which may also have the information (continue with 1)
- 4a. wrong document is viewed or document is damaged
  - 4a1. Viewer alerts owner (if not owner)

**Sub-Variants:** 6. Viewer may use device which cant view the Document types

**Related information:** Devices should support Document type viewing. Document need to be in good quality. Viewing should not need to load longer than 5 seconds. Viewing field needs to be big enough to see all important details
